

**KITTY**  
**Diabetic**

*Black and white domestic  
short hair, pigmented left eye*

- ❖ Dental today
- ❖ **PZI insulin – BCP insulin U100, 5.0 units b.i.d.- in white plastic container with purple top labelled Kitty.**  
**Please, use *u100 syringes (the small ones)* with this insulin not the u40 syringes that are normally used with the Blue Ridge**
- ❖ **If she eats ok and needs it, there is R in the container. She is receiving 2 units of R (in addition to the pzi) 30 minutes after eating breakfast providing she eats a normal meal and blood glucose is over 350. We are seeing a drop of \_\_\_20-70 pts\_\_\_\_\_ on the 2 units of R about 1.5 hours post shot**
- ❖ Time of last shot \_\_\_\_\_8pm\_\_\_\_\_ Tues. evening
- ❖ She has not had any food since midnight. She has had water.
- ❖ Normally will eat one- two cans Fancy Feast for breakfast. She has 2 cans low carb Fancy Feast in New England Press Association bag she has with her.
- ❖ Drinks large amounts of water
- ❖ Please weigh Kitty while she is here  
Weight \_\_\_\_\_

*I am not sure her former vet checked for Cushings. If it is not in her record, can she be checked?*

**If there are problems or questions-please call me  
xxx-xxxx or xxx-xxxx**

THANKS  
Sue
